

1 meter separation due to TEMPEST

This diagram is built to illustrate the possible layout of a multiple security solution using ClearCube's I/Port (IP Switching) deskside solution.

The network infrastructure that is used will be standard industry components (in this diagram, a Cisco Catalyst 29xx switch is used for the systems). The network connections can be Cat5 cable or Fiber. However, it should be noted that current releases of the ClearCube solution offer RJ45 network connections only. For Fiber connections, a standard RJ45 to MTRJ (or SC) media converters can be used.

An Avocent SwitchView SC has been used as the KVM at the user desk. Alternative KVM solutions are also possible.
