

CLEARCUBE

Software Options

ClearCube delivers exceptional security, reliability, manageability, and space savings with a lower total cost of ownership for the enterprise PC. ClearCube's software products are a key part of the overall solution that helps you manage your CPU Blades for maximum uptime.

Uptime Management Tools – Standard Configuration

ClearCube's Uptime Management Tools are the software interface for the Blade Switching BackPack that is an option for the ClearCube Cage. The Uptime Management Tools include control over the following blade switching features:

Spare Switching: An administrator can instantly switch any desktop user from the user's primary CPU Blade to a single spare CPU Blade.

1xN Administrator Control: The administrator can use a dedicated C/Port with monitor and peripherals to take control of any of the CPU Blades in a Cage or any of the CPU Blades in an entire rack.

Supervisor View: The administrator can use a dedicated C/Port with monitor to view any user's monitor screen for training, help desk support, or performance monitoring purposes.

These modes can be accessed through an application that runs on a dedicated computer that communicates with the Blade Switching BackPack(s). The administrator and supervisor modes require a separate C/Port that is used for controlling or viewing other CPU Blades. Spare switching can also be controlled through a remote access option through a web browser from any computer.

Remote Management Bundle with Altiris eXpress Deployment Server

For complete remote control capability, flexibility and advanced image management the Uptime Management Tools are available in a bundle that adds Altiris eXpress Deployment Server -- remote management software that completes the ClearCube remote systems management solution. ClearCube has partnered with Altiris to provide a complete set of desktop management software solutions together with ClearCube's C3 architecture.

Altiris eXpress Deployment Server is a computer management solution that builds upon *RapiDeploy's* innovative deployment features, *LabExpert's* patented remote-boot technology, and *RapidInstall's* change management tools. In addition, it adds powerful new Wired for Management and PXE services, task scheduling and a simplified drag-and-drop GUI. Altiris eXpress is fully enabled for Intel Wired for Management (WfM) with such time-saving features as Wake on LAN and Pre-boot eXecution Environment (PXE).

Altiris eXpress lets you install and fully configure new CPU Blades and PCs automatically-from scratch. It also lets you manage remote and mobile users who are only occasionally connected via e-mail or the Internet. With Altiris eXpress Deployment Server you can:

- Get a handle on PC management chores for your entire company
- Quickly deploy and configure new CPU Blades
- Easily deploy OS and application changes and updates to your CPU Blades
- Backup and restore registries located on a client CPU Blades
- Backup and restore an entire CPU Blade or just what's been changed since the last benchmark
- Distribute software to all your CPU Blades with a single click of the mouse
- Schedule management tasks when they're convenient for you and your organization
- Remotely control and view user's CPU Blades over your LAN (remote Admin/Supervisor mode)
