

Topic: Modified Front Panel LED Functionality on R2100
Component(s) Affected: Model R2100 Dual Xeon CPU Blade
Date: January 14, 2004

OVERVIEW / ENVIRONMENT

The R2100 blade front panel LED functionality differs slightly from the front panels on the R1100 and R1150.

DETAILED DESCRIPTION

The NIC LED (bottom most LED, as viewed from the front of the blade) is the NIC activity LED. It no longer serves as an indicator of connection speed and reflects LAN activity only. If there is activity on either of the NICs through the RJ45 connections on the back of the cage, then the NIC LED will flash green accordingly.
