

Topic: I/Port I8800 Update: Microsoft Security Update Combination #2
Component(s) Affected: I/Port I8800, XPe
Date: March 23, 2005

OVERVIEW / ENVIRONMENT

ClearCube has provided a new I/Port update file to improve security on the I8800 I/Port. This update comprises Microsoft Security Updates MS05-001 and MS05-002 for Windows XPe as they apply to ClearCube I8800 I/Port devices. This update addresses a number of vulnerabilities, as listed in this Technical Bulletin. MS05-002 replaces MS03-045, a previous update.

Microsoft Security Updates MS05-001 and MS05-002 are rated by Microsoft as critical updates for Windows XP.

DETAILED DESCRIPTION

This vulnerability is addressed in MS05-001:

<http://www.microsoft.com/technet/security/bulletin/ms05-001.mspix>

<http://www.cve.mitre.org/cgi-bin/cvename.cgi?name=CAN-2004-1043>

<http://www.kb.cert.org/vuls/id/972415> — The Microsoft Windows HTML Help ActiveX control contains a cross-domain vulnerability that could allow an unauthenticated, remote attacker to execute arbitrary commands or code with the privileges of the user running the control. The HTML Help control can be instantiated by an HTML document loaded in Internet Explorer or any other program that uses MSHTML.

These vulnerabilities are addressed in MS05-002:

<http://www.microsoft.com/technet/security/bulletin/ms05-002.mspix>

<http://www.cve.mitre.org/cgi-bin/cvename.cgi?name=CAN-2004-1049>

<http://www.kb.cert.org/vuls/id/625856> — The Microsoft Windows LoadImage API routine is vulnerable to an integer overflow that may allow a remote attacker to execute arbitrary code on a vulnerable system.

<http://www.cve.mitre.org/cgi-bin/cvename.cgi?name=CAN-2004-1305>

<http://www.kb.cert.org/vuls/id/697136> — A vulnerability exists in the way the Microsoft Windows kernel processes animated cursor (.ani) files with a rate number set to zero. Exploitation of this vulnerability may allow a remote attacker to cause a denial-of-service condition.

RESOLUTION

To reduce the threat of these vulnerabilities, install this security update. This update is provided in a zipped file containing this Technical Bulletin, and these files:

- The local installer, in a folder named **Stand Alone**.
 - A batch file named `Update.bat`
 - A folder named `I/PORT-CLIENT`
- The Grid Center remote installer, in a folder named **GCUpdate**.
 - A batch file named `updateGC.bat`
 - A zipped folder named `I/PORT-CLIENT.zip`

The local installer is an executable file that is run by physically carrying the file to the I/Port on a Mass Storage Device such as a key drive, and then executing it.

The Grid Center remote installer is run from the Grid Center Console, in the Update View, and can be applied to multiple I/Ports or I/Port groups simultaneously.

INSTALLING UPDATE LOCALLY

To install an update locally, do the following:

1. Load the update file onto a Mass Storage Device (MSD) such as a key drive.
2. At the I/Port, log in as administrator. Press and hold the Shift key and select **Logoff** from the Start menu. Keep the Shift key depressed until the Administrator Login dialog box is displayed. The factory default Administrator account is `administrator` and the default password is `clearcube`. These can be changed in the User Accounts control panel.
3. Insert the USB storage device into an available USB port.
4. Browse to the folder on the storage device that contains the update file.
5. Double-click the `Update.bat` file. The update installs automatically and reboots the I/Port.

Note: Do not press any keys during the update. Allow it to run undisturbed.

INSTALLING UPDATE REMOTELY USING GRID CENTER

To install an update remotely with Grid Center, do the following:

1. Load the update files onto a volume accessible by the Grid Center Console.
2. Start Grid Center (if it is not already running).
3. From the Update View, select an individual I/Port or an I/Port Group to update.
4. In the I/Port Update View dialog box, enter the path and name of the `I/PORT-CLIENT.zip` file (you can browse for this).
5. Enter the path and name of the `updateGC.bat` file (you can browse for this).
6. Press the **Update** button.
7. A dialog box confirming the successful update is displayed when the update is complete. If any I/Ports did not update successfully, a dialog box containing the names of these I/Port is displayed. Write these names down and deploy the update to these I/Ports individually.
8. If an I/Port cannot be successfully updated via Grid Center, attempt to update the I/Port locally (using the first procedure) before contacting ClearCube technical support.
