

Topic: Autologin Snap-in for Eon e100 I/Ports
Component(s) Affected: Eon e100 I/Port, XPe
Date: August 30, 2005

OVERVIEW / ENVIRONMENT

The default login setting for XPe-based Eon e100 I/Ports does not provide autologin into Windows XPe, as was the case with the I8800 I/Ports. ClearCube has issued a software snap-in that corrects this issue.

DETAILED DESCRIPTION

Autologin to Windows XPe was provided as a default on the I8800 I/Ports. Installing this snap-in provides autologin for XPe-based Eon e100 I/Ports. ezRemote Manager software is required to install this snap-in.

Note: Do not use this snap-in on I8800 or I8010 I/Ports.

RESOLUTION

This snap-in should be applied to all XPe-based Eon e100 I/Ports for which autologin to Windows XPe is desired. This patch is available on the ClearCube Support Website as:

`Neoware_XPe_Enable_AutoLog_Snapin.zip`

This file contains the following files:

- `Enable_Autolog.key`
- `install.2do`
- This Technical Bulletin

within a folder named **Neoware_XPe_Enable_AutoLog_Snapin**.

To install the patch using ezRemote Manager, do the following:

1. Download and unzip the `Neoware_XPe_Enable_AutoLog_Snapin.zip` file.
2. Copy the **Neoware_XPe_Enable_AutoLog_Snapin** folder to the ezRemote Manager server.
3. Start ezRemote Manager and select the I/Port(s) to be patched.
4. Click the **Snapin Manager** icon in the menu bar.
5. Browse to the **Neoware_XPe_Enable_AutoLog_Snapin** folder, select the `install.2do` file, and click **OK**. The patch is installed and the I/Port reboots when the installation is complete. Following the reboot, autologin into Windows XPe is enabled.

Note: Re-imaging an XPe-based Eon e100 I/Port will disable autologin, requiring reinstallation of this snap-in.
