

Topic: R2100 BIOS Version 2.5 Shows Incorrect Version Number
Component(s) Affected: R2100 Blade
Date: February 8, 2005

OVERVIEW / ENVIRONMENT

The first BIOS splash screen for the R2100 BIOS version 2.5 shows an incorrect version number.

DETAILED DESCRIPTION

After version 2.5 of the R2100 BIOS is successfully installed (please see *TB0116JS, R2100 BIOS Update Version 2.5*), the first BIOS splash screen after startup displays the following strings:

```
BIOS:Phoenix Technologies LTD 6.00(F2.1)  
Press <F2> to enter SETUP <F10> for Boot Options
```

The BIOS version is incorrectly reported in this screen.

The next screen displays these strings:

```
Initializing Intel(R) Boot Agent GE v.1.2.16  
PXE 2.1 Build 083 (WfM 2.0)
```

This represents the PXE version and not the BIOS version.

The next BIOS splash screen is titled `PhoenixBIOS Setup Utility R2100 F2.5` and displays the correct version number (2.5) and shows the correct BIOS date as 12/12/05.

This reflects the correct version number and date.

When **F2** is pressed to enter the BIOS utility, the BIOS setup utility screens display the title `PhoenixBIOS Setup Utility R2100 F2.5` which bears the correct version number of 2.5.

Only the initial splash screen shows the incorrect version number. This version number should be disregarded. Use the version number on the actual setup utility screens.
